

Rejuvenate

SPDT 4 LIFE Newsletter - June 2016

New beginnings

New beginnings

June has been a very exciting time for all of those involved with our cancer therapies team. We have a new name, a new logo, a new website and a whole new profile.

Most significantly we have a new location - Golden Sand Bay Hospital in Guangzhou. This new space allows us the opportunity to develop some very exciting projects to further enhance our holistic approach to treating our cherished patients.

In this month's edition of Rejuvenate we tell you more about some of these changes and introduce you to our Director of Oncology at SPDT 4 Life - Dr. Peng.

New name, New logo

Our new name is SPDT 4 LIFE and the meaning behind it can best be explained in conjunction with our new logo.

SPDT 4 LIFE - Restore Hope, Restore Life.

We have put much thought and work into the design and meaning behind the name and logo. By no means is it just a random image. Each of the elements has significance.

The 4 in SPDT 4 LIFE represents the 4 stage strategy that we have developed based on years of experience and innovation in the fight against cancer. Here is a brief explanation of these stages. (A more detailed explanation will be available on our new website.)

1. Personalised diagnosis. Includes using the ISET-CTC blood filter test, CTC test, RGCC test, PET scan and patient treatment history analysis to get a thorough understanding of each patient's condition. Once we have a clear understanding of this we are then able to tailor a specific treatment protocol for each individual patient.
2. De-bulking treatment. In certain cases parts of tumours that cannot be completely excised are removed to enhance the effectiveness of other treatments - such as Radio-seeds, interventional chemotherapy, HIFU and Frequency Ablation.
3. Whole body treatment. Such as - SPDT, Hyperthermia, Chinese medicine, natural therapies based on individual sensitivity to different treatments, drugs and supplements as found in the RGCC test.
4. Post SPDT home treatment. Includes natural therapies, meditation, diet, exercise program - all designed to restore patients to optimal health and build a strong immune system that does its job - namely kills cancer cells. Individual monitoring and tracking with CTC tests to prolong life and control any tumours. These 4 steps are also represented in the 4 circles and 4 colours.

The circles represent life - the circle of life.

The colour of the circles are significant also. Yellow is the universally recognised colour of cancer awareness. Pink obviously relates to breast cancer and blue and jade green relate to colon and liver cancers respectively.

One of the things we hear over and over again from our patients and their families is that our treatment gives them hope. In most cases patients that come to us have been told by their doctors at home that there is nothing that can be done for them - they should just go home and get their affairs in order. The doctors give them no hope.

When these patients come to us their hope is restored and they feel like they have a chance. Their will to live and to fight kicks in and that is such an important factor for cancer patients.

Our focus is therefore to Restore Hope, Restore Life.

We hope you like our logo as much as we do.

New location

After 6 wonderful years at the Renkang Hospital in Dongguan we have moved our treatment centre to a new location - the Golden Sand Bay Hospital in Guangzhou.

Golden Sand Bay offers many benefits to our patients and staff. Firstly the location, Guangzhou is the third largest city in China - after Beijing and Shanghai. Guangzhou is a truly bustling metropolis boasting all the coveted trappings of a modern city. Shopping, restaurants, theatre, concerts, sporting activities, museums, art galleries and a first class public transport system. The Metro subway station is located directly across the road from the hospital and the airport is only 35 minutes away by car.

Golden Sand Bay hospital is only 12 months old so the facilities are fresh and new. The space we occupy on the 12th floor is much larger than what we had at Renkang so we are able to accommodate more than double the number of patients. We now have 36 rooms that are generously large and we have taken care to make them feel more like a luxurious hotel room than your traditional hospital room.

The extra space also allows us to have larger more open plan communal areas where patients can socialise and where we can host our famous patient events.

We are constantly working on ways to improve our treatment protocols and our service for the benefit of our cherished patients and to that end we have some very exciting new projects underway, We look forward to bringing you updates regarding these projects in future newsletters.

Dr Peng's inspirational journey of prolonging life and improving its quality

In the eyes of his colleagues, he is a wise and venerable expert. To the many patients for whom his oncological efforts have been immense - he's a life-changing angel.

He, of course, is Dr Peng Zhiyuan, the oncology director at SPDT 4 LIFE at the Golden Sand Bay Hospital in Guangzhou and widely regarded as one of the true pioneers of Sono-Photo Dynamic Therapy – or SPDT – treatment.

Dr. Peng looks in on the progress of one of his many patients at SPDT 4 LIFE's previous home Renkang Hospital.

It was some six years ago that Dr Peng and his team took their first tentative steps towards a new and revolutionary cancer treatment – in China as much as anywhere else in the world – that challenged conventional thinking and has since delivered what many argue is a therapy that is multiple times better than any other available today for metastatic cancer.

And unlike chemotherapy, it's non-toxic, free of pain and suffering and can be repeated often.

SPDT is a significant breakthrough, using the three components of a photo and sono-sensitive activator, sources of red light and ultrasound, and oxygen to target cancer cells.

With a quarter of a century of oncological experience behind him and a string of esteemed academic accolades having come his way, Dr Peng is quick to stress that his true worth, what really drives him to get up each morning and go to bed each evening feeling he's accomplished something, comes from seeing the dramatic improvement in his patients, most of whom arrive at SPDT 4 LIFE quite literally on death's door.

They'd trod the traditional Western path of oncology treatment to no avail – and in many cases, they were worse off, the toxins reducing them to shadows of their former selves.

And with the SPDT treatment constantly improving, the percentage of patients arriving at SPDT 4 LIFE who have improved dramatically within weeks of undergoing the treatment keeps on rising. Indeed, everyone to undergo the treatment in 2016 has got radically better.

With an impressive six-year SPDT track record and literally hundreds of patient case studies to draw on, SPDT 4 LIFE is undoubtedly at the forefront of world developments in the treatment.

But Dr Peng and his colleagues are not resting on their laurels and are currently in the process of developing a new type of sensitiser that promises to further restore the patient's health and remove almost all cancer.

There's also a second and longer term non-toxic home treatment that - while also a work in progress - offers real hope that it will be curative and certainly that, at the very least, it will defer recurrence.

It's these sorts of advancements that make Dr Peng really proud – and his growing group of patients eternally grateful.

SPDT pioneer and innovative oncology director at SPDT 4 LIFE at Golden Sand Bay Hospital - Dr Peng.
